

Agent Asynchronous Communication & State Flow

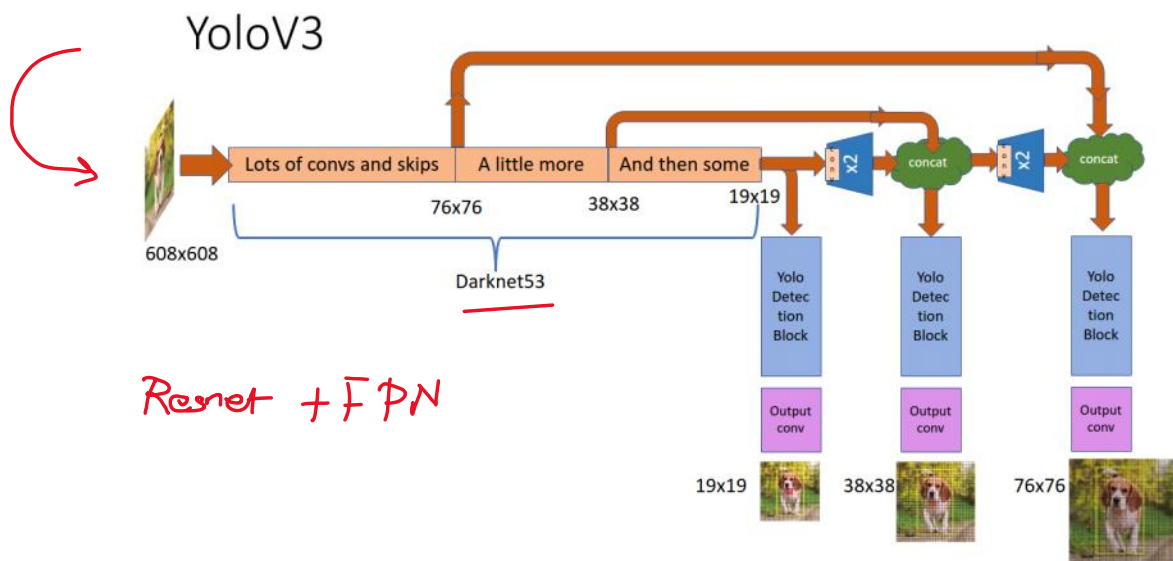

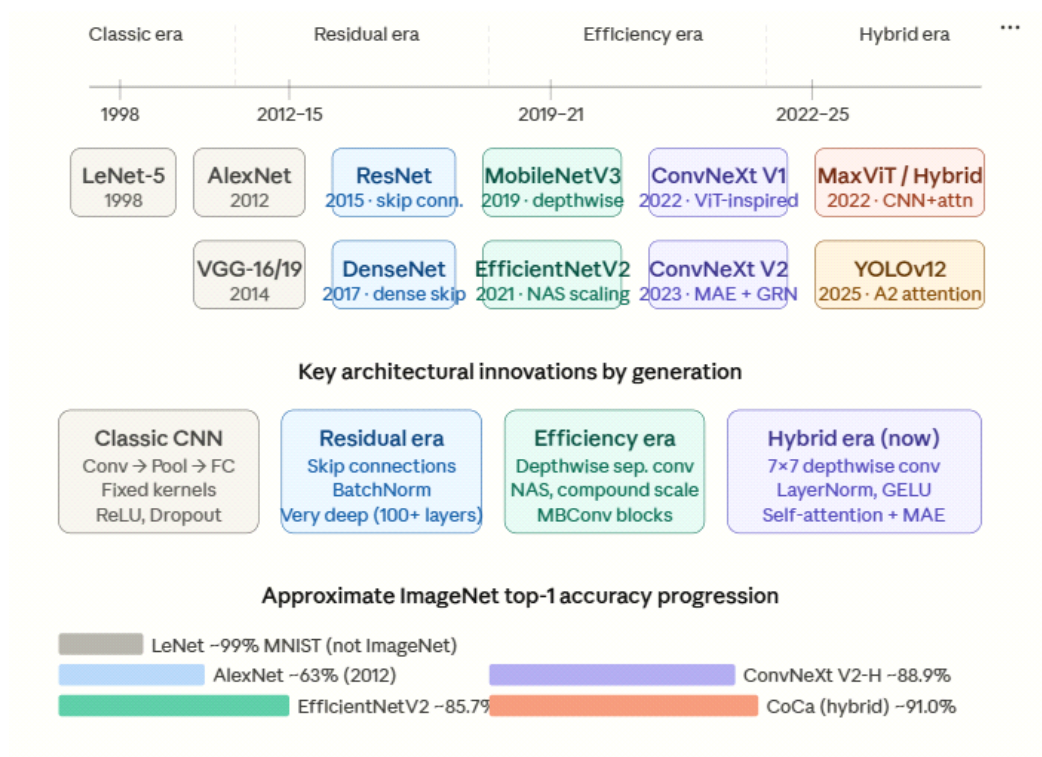

AI Blog Generation Flow

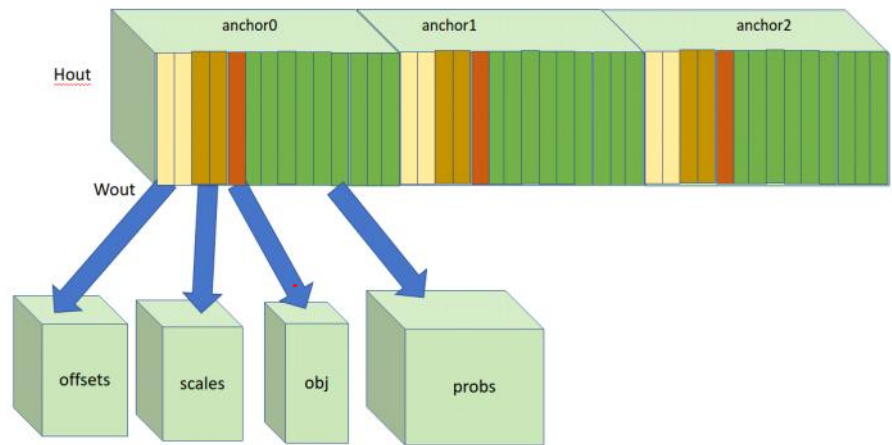

Great research gathered. Let me now build you a comprehensive visual map of the modern CNN landscape and then explain each architecture in depth.

From <<https://claude.ai/chat/e00785f9-66d8-478f-8f90-4b5e09989c31>>

$$L_{total} = w_{box} \times L_{CloU} + w_{cls} \times L_{VFL} + w_{dfl} \times L_{DFL}$$

$L_{CloU} = 1 - \text{IoU} + \rho^2/c^2 + \alpha \cdot v$ (box regression)
 $L_{VFL} = \text{Varifocal (IoU-weighted BCE)}$ (classification)
 $L_{DFL} = \text{Cross-entropy on bin distribution (offset quality)}$

Weights: $w_{box}=7.5$, $w_{cls}=0.5$, $w_{dfl}=1.5$ (YOLOv12 defaults)
